

# OUR THINNEST ANTENNA YET

We have engineered the Flex-Panel Antenna to suit the most lightweight and smallest footprint applications. Perfect for travel situations, this flexible antenna can be quickly deployed to any surface, like a car window, supporting on-the-fly missions.

This flexible antenna is also unobtrusive and easily hidden — behind a picture frame, in tight spaces, etc. — to satisfy aesthetic concerns in fixed-installation IPMS applications where it is not practical to place antennas in walls or ceilings. No longer do you need to wrangle large, obtrusive antennas into awkward spaces.

A rigid, fixed-installation model is also available for more rugged use cases, such as travel missions where quick deployment is a must, or for long-term IPMS installations.

## SPECIFICATIONS

Frequency coverage	100 MHz - 26.5 GHz (SMA)
(dependent on connector)	100 MHz - 50 GHz (K)
Hard panel dimensions	12 × 16 × 0.5 in, approx.
Flex antenna dimensions	11 × 14 in, approx.

A GREAT FIT FOR ANY MISSION
